Signal conditioners with Functional Safety

The MACX ranges

Reliable and safe MACX signal conditioners

Maximum safety for your systems and machines: in all phases of the product lifecycle, MACX signal conditioners have been developed and produced according to standards for Functional Safety.

Concept

All safety-related functions are defined and assessed right from the creation of the product specification.

Development

Product development incorporates hazard and risk analyses as well as measures for ensuring the required safety integrity.

A solution for every type of signal

Safely isolate, adjust, filter, and amplify: MACX Analog offers comprehensive solutions for analog signal processing.

For more information, see page 6 onwards

Maximum explosion protection

Highly compact and leading technology: with a design width of just 12.5 mm, MACX Analog Ex offers single and two-channel signal isolators for intrinsically safe circuits in the hazardous area.

For more information, see page 10 onwards

Analog signals with performance level

With MACX Safety, you can integrate analog signals easily into your safety application according to the Machinery Directive, even for intrinsically safe circuits in the hazardous area.

For more information, see page 16 onwards

Ex approvals according to ATEX, IECEx

- Ex i for intrinsically safe circuits up to zone 0 and zone 20
- Ex n for installation in zone 2

Safety lifecycle

Phoenix Contact meets the requirements of Functional Safety according to IEC 61508 in a standardized development process. We take measures for fault avoidance and fault control into consideration, from the very development and production of a device right up to device operation.

Production

During production, all of the defined specifications and test instructions are consistently implemented, verified, and validated.

Device operation

Certified safety offers the highest standard of quality and reliability during device operation.

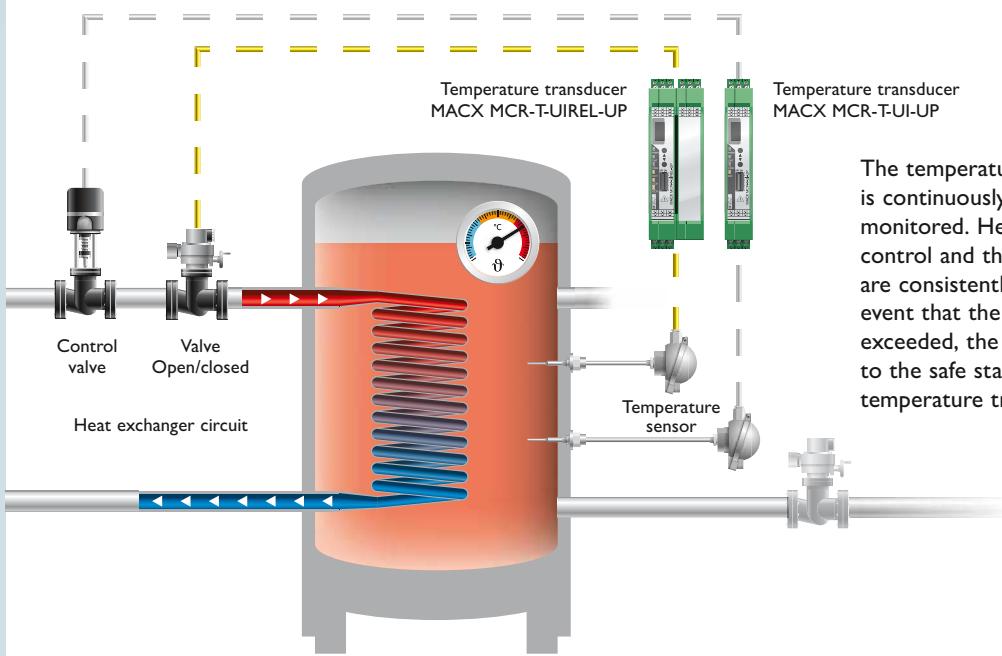

Tested quality and safety

Independent test centers are involved throughout the entire development cycle and audit the measures as part of a full assessment. The certificates, technical information, and the safety manual are available for you to download.

Temperature control and monitoring with safe shutdown

Temperature transducer
MACX MCR-T-UIREL-UP

Temperature transducer
MACX MCR-T-UI-UP

The temperature in the tank is continuously controlled and monitored. Here, closed-loop control and the safety equipment are consistently isolated. In the event that the limit values are exceeded, the process is switched to the safe state via the additional temperature transducer.

MACX signal conditioners

Your advantages

The MACX signal conditioner ranges combine high mechanical and electronic functionality in the same housing.

Benefit from the many advantages of this consistent design.

HART communication

Bidirectional transmission of the HART communication signal for numerous analog IN/OUT product types.

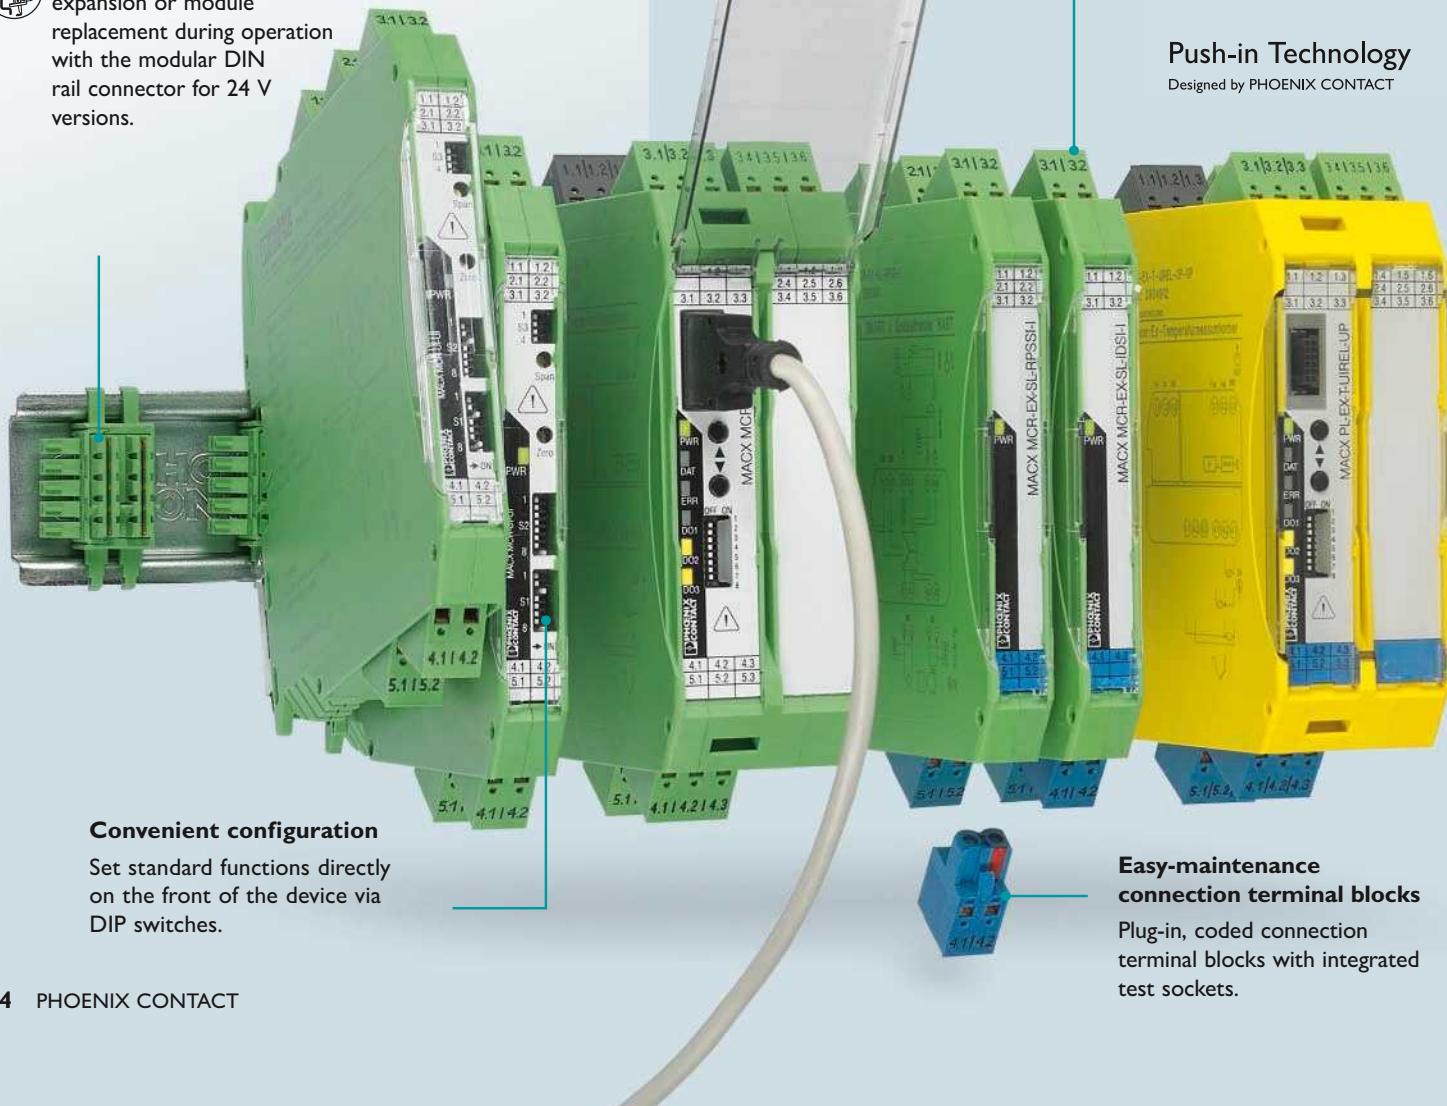

Flexible power supply

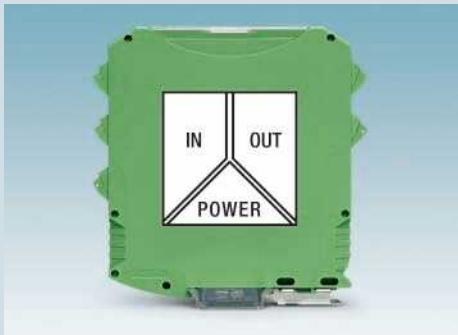

Versions with wide range input enable worldwide use in power supply networks.

Easy power bridging, system expansion or module replacement during operation with the modular DIN rail connector for 24 V versions.

Precise, interference-free signal transmission

Precise and interference-free signal transmission, thanks to the patented transmitter concept with safe electrical isolation.

Long service life and high operational reliability

Long service life and high operational reliability over the entire operating temperature range, thanks to low power consumption and self-heating.

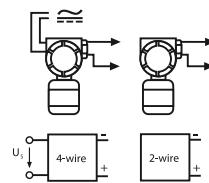

Easy configuration and monitoring

Extended configuration and monitoring can be conveniently carried out via the PC with the free ANALOG-CONF software or via FDT/DTM.

Product overview

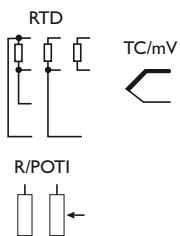

Analog IN/ Analog OUT

Signal conditioners

- Universal and standard 3-way isolators
 - 3-way repeater power supplies (single and two-channel)
 - 3-way output isolators
 - 4-way signal duplicators
- MACX Analog Page 7

Digital IN

NAMUR signal conditioners

- Single and two-channel
 - Relay and transistor outputs
 - Signal duplicators
- MACX Analog Page 9
MACX Analog Ex Page 14

Digital OUT

Solenoid drivers

- Versions with various output characteristic curves for all solenoid valves on the market
 - Loop-powered versions
 - Versions with logic input
- MACX Analog Ex Page 15

Termination Carriers Page 18

Accessories Page 22

- Operator interface and display unit
- Supply components
- Programming adapter
- HART multiplexer and more

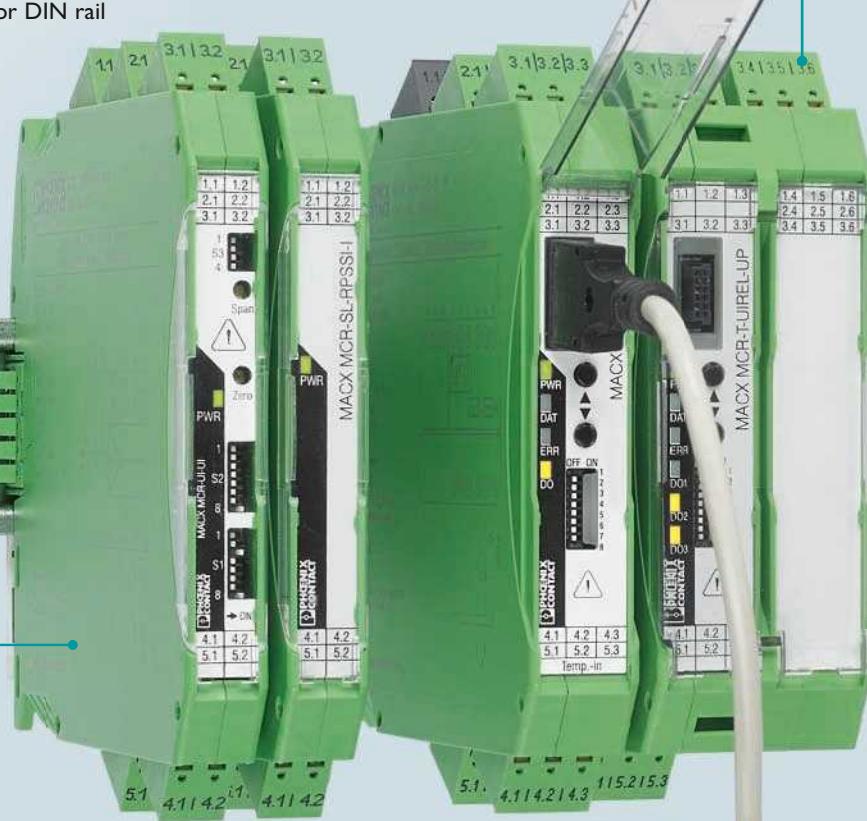

A solution for every type of signal MACX Analog

Safely isolate, adjust, filter, and amplify:
MACX Analog offers comprehensive
solutions for analog signal processing. Save
planning and operating costs by combining
high signal flexibility with safe isolation and
SIL evaluation.

Operator interface

- On-site display of process values
- Easy monitoring, configuration, and copying without software
- Can be snapped onto a measuring transducer or DIN rail

Analog signal conditioner

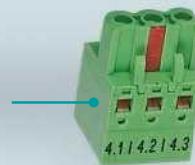

- 1600 signal combinations
- Easily adjustable via DIP switch
- Short response time

Easy-maintenance connection terminal blocks

Plug-in, coded connection terminal blocks with integrated test sockets.

Universal temperature transducers

- For RTD, TC, resistance-type sensors, mV voltages, and customer-specific characteristic curves
- Universal power supply
- Freely adjustable PDT relays as signal and alarm outputs

The DIN rail connector enables the modular bridging of the 24 V supply voltage.

Versions with wide range input for worldwide power supply networks (MACX MCR-...-UP).

Maximum explosion protection MACX Analog Ex

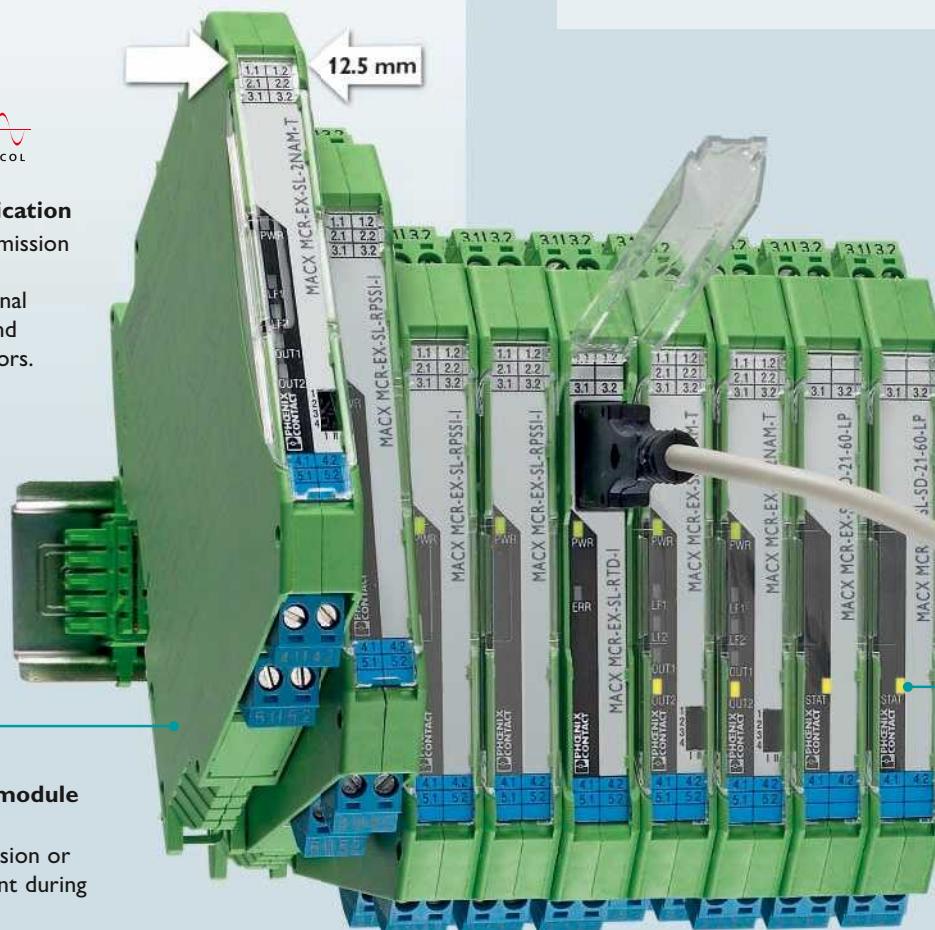

Highly compact and leading technology:
with a design width of just 12.5 mm,
MACX Analog Ex offers a wide range of
single and two-channel signal isolators for
intrinsically safe circuits in the hazardous
area. The products are type-tested by
an independent NAMUR test laboratory
in accordance with NE 95 and therefore
satisfy the high requirements of the
chemical industry.

HART communication

Bidirectional transmission
of the HART
communication signal
for all analog IN and
analog OUT isolators.

Suitable for all Ex zones and gas groups

All MACX Analog Ex signal conditioners are approved in accordance with the applicable ATEX and IECEx standards:

- **Ex i** – for intrinsically safe circuits up to zone 0 (gas) and zone 20 (dust)

Marking: $\text{Ex II (1) G [Ex ia Ga] IIC}$
 $\text{Ex II (1) D [Ex ia Da] IIIC}$

- **Ex n** – for device installation in zone 2

Marking: $\text{Ex II 3(1) G Ex nA nC [ia Ga] IIC T4 Gc}$

Relevant national approvals such as UL and GOST are available.

Push-in Technology

Designed by PHOENIX CONTACT

Hot-swappable module replacement

Easy system expansion or
module replacement during
operation.

Fast diagnostics

LED indicators
according to NE 44
for supply voltage,
switching state, and
fault.

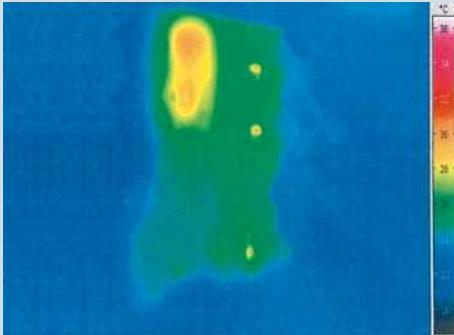

Easy-maintenance connection terminal blocks

Plug-in, coded connection
terminal blocks with integrated
test sockets.

Precise, interference-free signal transmission

Precise and interference-free signal transmission, thanks to the patented transmitter concept with safe electrical isolation.

Long service life and high operational reliability

Long service life and high operational reliability over the entire operating temperature range, thanks to low power consumption and self-heating.

Fast and error-free signal connection

Compact Termination Carriers connect MACX Analog Ex devices to the automation system easily by means of plug and play.

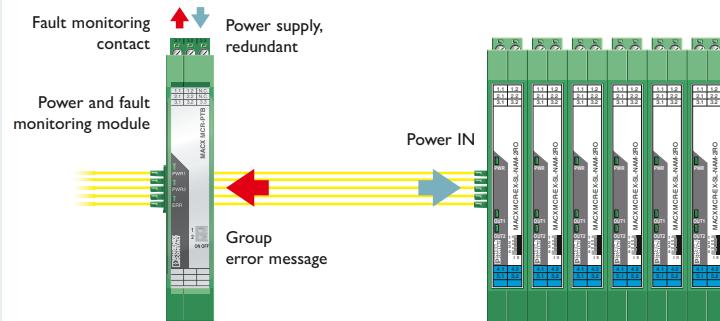

Power supply and diagnostics – flexible and easy with the DIN rail connector

Easily bridge the 24 V supply voltage using the modular DIN rail connector. This simplifies wiring and enables system expansion or module replacement even during operation.

The DIN rail connector offers two supply options:

1. Direct supply

Via any MACX Analog Ex module

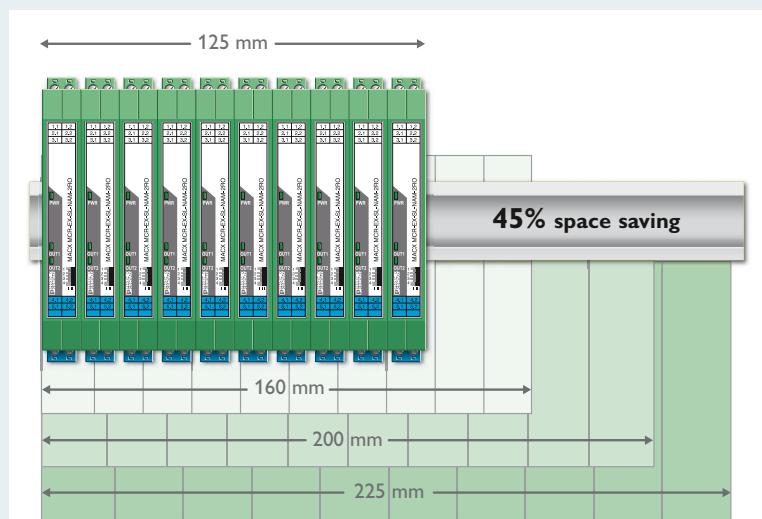

2. Via the power and fault monitoring module

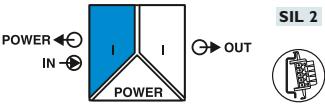

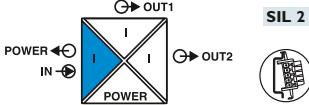

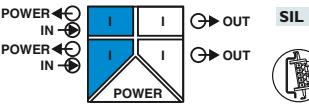

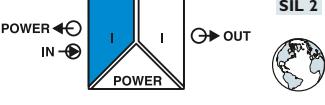

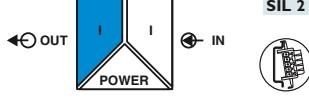

- Simple or redundant supply (decoupled from diode)
- Fault monitoring output (message in the event of auxiliary voltage failure and line fault group message in the case of NAMUR signal conditioners)

Maximum explosion protection with minimum space requirements

With a housing width of just 12.5 mm for all single and two-channel 24 V devices, MACX Analog Ex offers space savings of up to 45% compared to other Ex i signal conditioners on the market.

The DIN rail connector enables the modular bridging of the 24 V supply voltage.

Versions with wide range input for worldwide power supply networks (MACX MCR-EX-...-UP).

Analog signals with performance level MACX Safety

Integrate analog signals easily into your safety application according to the Machinery Directive. The MACX Safety analog signal conditioners are certified according to EN ISO 13849-1 with performance level PL d.

MACX Safety Ex also supports the safe processing of analog, intrinsically safe Ex signals.

MACX Safety and MACX Safety Ex offer the following advantages:

- Easy integration of analog signals into the safety chain, thanks to the performance level, PL d
- Direct, safe switching of limit values possible without an additional safety controller
- Easy planning of the safety application via SISTEMA
- Easy to combine active or passive analog signals with other safety modules
- Safe processing of intrinsically safe Ex signals with MACX Safety Ex [Ex ia]

Ex approvals according to ATEX, IECEx

- Ex i for intrinsically safe circuits up to zone 0 and zone 20
- Ex n for installation in zone 2

Push-in Technology

Designed by PHOENIX CONTACT

Easy-maintenance connection terminal blocks

Plug-in, coded connection terminal blocks with integrated test sockets.

Versions with wide range input for worldwide power supply networks (MACX MCR-EX-...-UP).

Consistent interface solutions for system technology

Termination Carrier

Using the compact Termination Carriers, you can connect MACX Analog devices to your automation system quickly and without any errors. You can establish the signal connection with standardized system cables by means of plug and play.

The following standard DIN rail devices are available for safe signal conditioning:

- Signal conditioners for Ex i circuits and SIL applications
- Highly compact signal conditioners for non-Ex i circuits
- Safe coupling relays for process automation

Your consistent interface solution
for system technology

1. Select a standard module

Select the appropriate functions for signal conditioning from a wide range of standard DIN rail devices.

The Termination Carrier concept

- Stable aluminum profile without pitch markings with integrated DIN rail contour for accommodating standard interfaces
- PCB protected in the profile, mechanically decoupled
- Integrated DIN rail mounting with end bracket
- Module connection by means of plug-in and coded cable sets
- Cover with marking options

2. Termination Carrier

Snap standard modules onto the integrated DIN rail contour in the profile. Connection to the Termination Carrier PCB is quick and safe with plug-in and coded cable sets.

Compact

For high packing density

- Space savings of up to 30 %, thanks to the compact design
- Space-saving arrangement of connection points
- Integrated end brackets

Robust

For high system availability

- Stable and vibration-resistant aluminum carrier profile
- Mechanically decoupled termination PCB
- Passive PCB without active components
- Redundant supply and monitoring electronics in a separate DIN rail device

Easy maintenance

For simplified documentation and startup

- Use of standard DIN rail devices
- Easily accessible connection points
- Module replacement during operation (hot swappable)
- Pre-assembled system cabling with front adapter

Flexible

For optimum adaptation

- Profile sections without pitch markings for controller-specific number of I/Os
- Different system plug types, including redundant
- Horizontal and vertical mounting

3. Front adapter with system cable

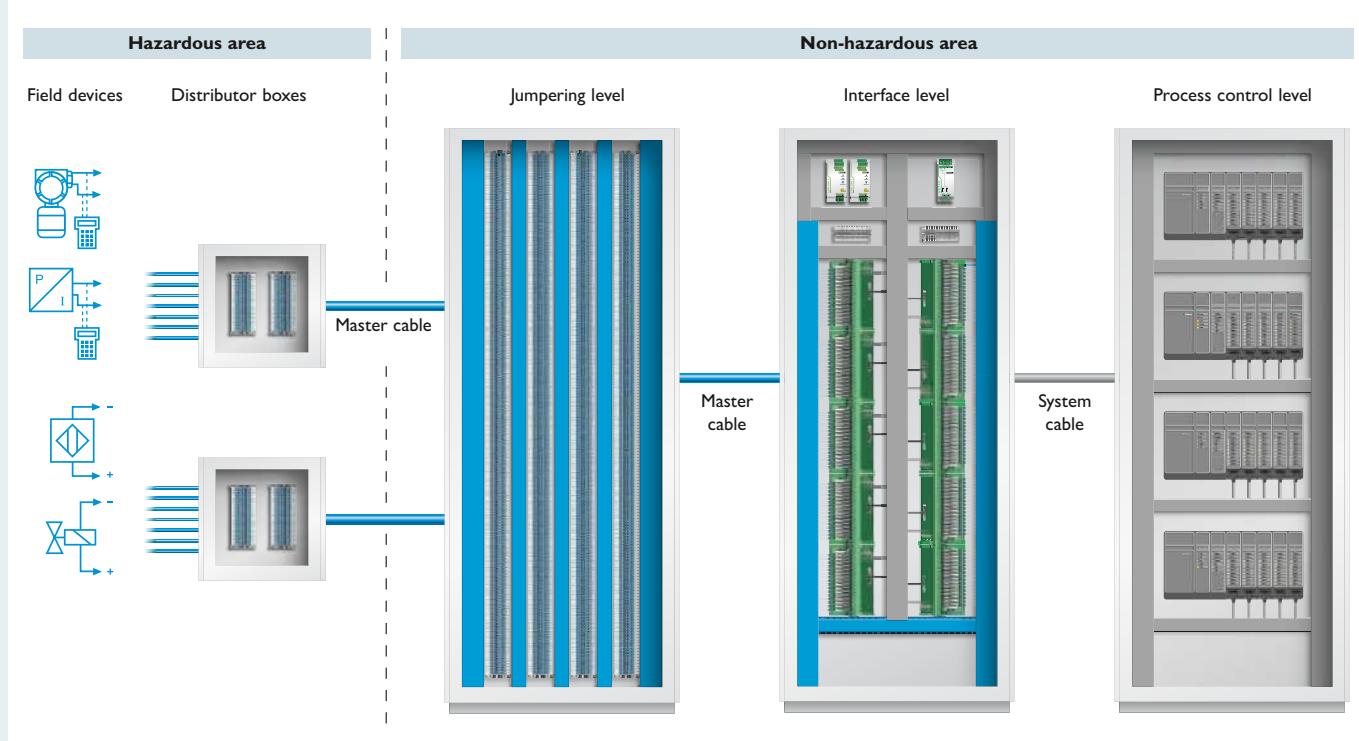

The devices are connected to controller-specific I/O modules via high-position system cables. These cables have standardized or controller-specific system connections.

ABB
Emerson
Honeywell
Invensys
Siemens
Yokogawa

and others

Diagram of a typical system with point-to-point wiring

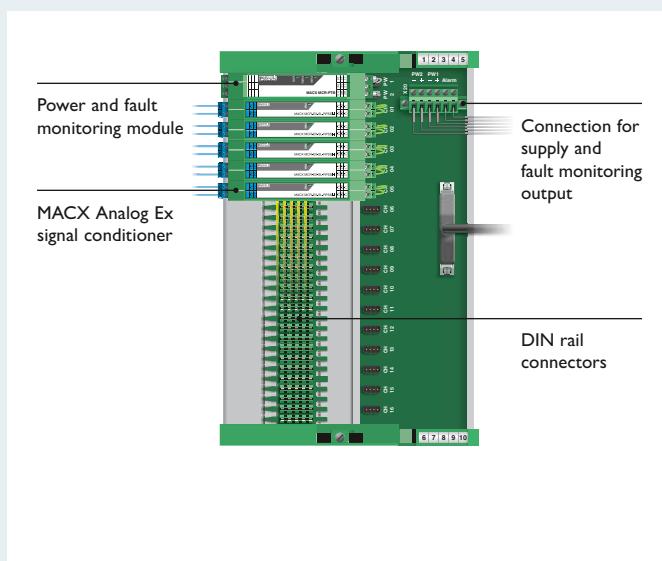

In the hazardous area, cables from intrinsically safe field devices are grouped together via distributor boxes to form multi-strand master cables. In the non-hazardous area, they are then routed to the interface level via marshalling distributors. From here the signal

conditioners are individually wired to the relevant I/O cards. The significant amount of time needed for installation and startup is greatly reduced by the Termination Carrier and the use of plug and play system cables.

Modular power concept for high availability

The signal conditioners are connected to a power and fault monitoring module via the integrated DIN rail connectors. This enables redundant supply and monitoring electronics in a separate device.

The termination PCB is therefore passive. It does not contain any active components whose failure would require the Termination Carrier to be replaced.

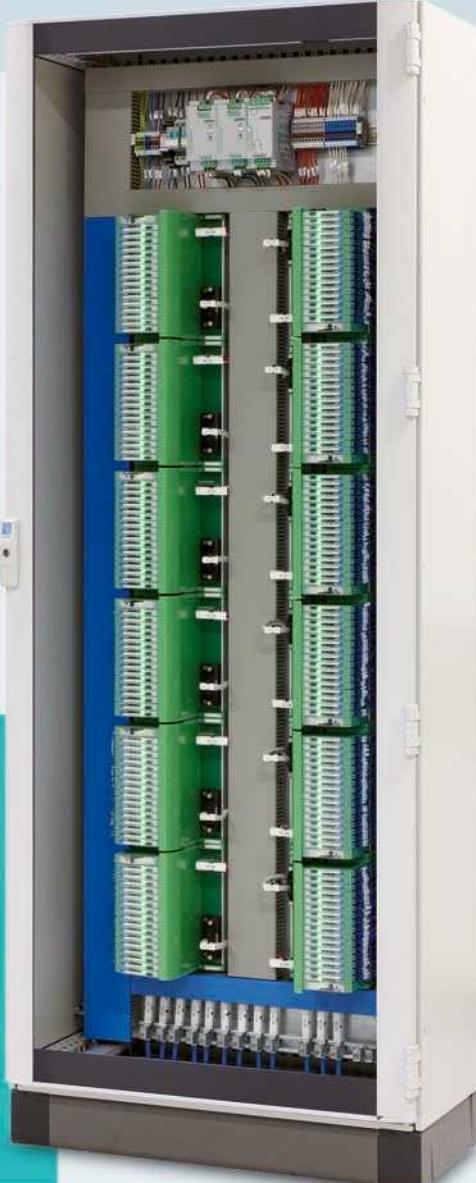

Efficient signal connection with MACX Analog Ex

In areas of process technology where potentially explosive atmospheres may occur, measuring and control circuits are usually designed with intrinsic safety protection type (Ex i). MACX Analog Ex i signal conditioners and measuring transducers isolate intrinsically safe circuits from non-intrinsically safe circuits at the interface level and safely limit the energy supplied to the hazardous area. Furthermore, they handle extensive signal conditioning tasks.

Space-saving and fast installation

The compact Termination Carrier solution enables you to integrate up to 384 signals in an 80 x 200 cm control cabinet when using two-channel MACX Analog Ex devices.

Mounting and startup can be carried out quickly and without any errors using pre-assembled system cables.

Termination Carriers

TC-D37SUB-ADIO16-EX-P-UNI
Order No. 2924854

Universal Termination Carrier for 16 MACX MCR(-EX) isolators.

TC-D37SUB-AIO16-EX-PS-UNI
Order No. 2902932

Universal Termination Carrier for 16 MACX MCR(-EX) isolators with connection for HART multiplexer.

In addition to universal Termination Carriers, numerous versions are available which are tailored to the I/O modules of various automation systems.

Accessories for MACX Analog

Operator interface

IFS-OP-UNIT

Order No. 2811899

For process value display and parameterization, can be plugged directly onto 35 mm devices and the IFS-OP-CRADLE cradle unit.

IFS-OP-CRADLE

Order No. 2811886

Cradle for IF-OP-UNIT for connection to 17.5 mm/35 mm modules and use as a remote display unit.

Programming adapter

MACX-USB-PROG-ADAPTER

Order No. 2811271

For programming the multifunctional devices with the ANALOG-CONF software or via FDT/DTM.

DIN rail connector

ME 6,2 TBUS-2 1,5/5-ST-3.81 GN

Order No. 2869728

For direct supply via any MACX Analog device or for supply via a power and fault monitoring module of the same shape.

Power and fault monitoring module

MACX MCR-PTB

Order No. 2865625 (screw connection)

MACX MCR-PTB-SP

Order No. 2924184 (push-in connection)

- Input voltage U_{IN} : 19.2 ... 30 VDC
- Output voltage U_{OUT} : U_{IN} - max. 0.8 V, at 3.75 A
- Error message - PDT relay

Dummy module

MACX MCR-EX-DUMMY-ISOLATOR

Order No. 2904970 (screw connection)

MACX MCR-EX-DUMMY-ISOLATOR-SP

Order No. 2905846 (push-in connection)

Intrinsically safe dummy module with no electrical function for connecting unused signal cables.

Function plug

MACX MCR-CJC

Order No. 2924993

MACX MCR-EX-CJC

Order No. 2925002

Plug for cold junction compensation for thermocouples, in combination with MACX...-(EX)-T-UI... temperature transducers.

MACX MCR-I20

Order No. 2905680

MACX MCR-EX-I20

Order No. 2905679

Connection terminal block for current signals (± 20 mA) for safe switching of limit values, in combination with MACX...-(EX)-T-UI... temperature transducers.

Accessories for MACX Analog

Multiplexer for HART signals

MACX MCR-S-MUX

Order No. 2865599

Multiplexer for the digital connection of HART-compatible field devices, such as measuring transducers or control valves, to a PC or a management system, 32-channel, including 14-wire flat-ribbon cable.

HART transfer board

MACX MCR-S-MUX-TB

Order No. 2308124

Transfer board for connecting HART field devices to the HART multiplexer.

PSM-ME-RS232/RS485-P

Order No. 2744416

Electrically isolated interface converter for converting from RS-232 (V.24) to RS-485. Automatic data direction changeover or via RTS/CTS.

Shield fast connection

SSA 3-6 (for Ø 3 - 6 mm)

Order No. 2839295

SSA 5-10 (Ø 5 - 10 mm)

Order No. 2839512

For connecting cable shielding to cable terminal points, can be connected to PLUGTRAB PT.

Marking material

UC-EMLP (11X9) (white)

Order No. 0819291

Self-adhesive plastic labels for device marking: UniCard, 10-section, lettering field size: 11 x 9 mm.

UC-EMLP (11X9) CUS (white)

Order No. 0824547

As above, plus marked according to your specifications.

For details, visit www.phoenixcontact.com.

Test plug

MPS-MT

Order No. 0201744

MPS-IH BK (black)

Order No. 0201731

MPS-IH GY (gray)

Order No. 0201728

MPS-IH GN (green)

Order No. 0201702

MPS-IH YE (yellow)

Order No. 0201692

MPS-IH BU (blue)

Order No. 0201689

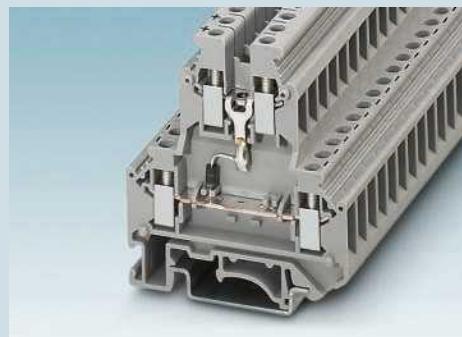

MPS-IH RD (red)

Order No. 0201676

MPS-IH WH (white)

Order No. 0201336

Test plug for 2.3 mm Ø socket hole, consisting of MPS-MT metal part and MPS-IH... color insulating sleeve.

Resistance circuit

UKK 5-2R/NAMUR

Order No. 2941662

D-UKK 3/5 (gray)

Order No. 2770024

D-UKK 3/5 BU (blue)

Order No. 2770105

Double-level terminal block with resistance circuit according to NAMUR for line fault detection in the case of mechanical contacts.

Important: for intrinsically safe circuits, only in combination with D-UKK 3/5... cover.

Always up-to-date, always available to you. Here you'll find everything on our products, solutions and service:
